Glacial Oak

Elevate your designs on budget. The epitome of quality, affordability and Australian excellence.

AUS-TIM
SUSTAINABLE TIMBER SOLUTIONS

Glacial Oak - Designed to replace Victorian ash

Glacial Oak is ASH's brand of a unique American Oak species from a slow-growing region in Northern America. Hand picked by colour and grade then milled in Heyfield (Vic) to the quality, specification and performance of packs you know and expect from the team at ASH.

Glacial Oak is a stunning yet sustainable hardwood of vast availability. Designed to replace Victorian ash in the architectural and manufacturing sectors.

Quality – Reliable – Attractive – Affordable – Set dimension – Well graded – Price stability – Compliance to Australian requirements – Glacial Oak has the lot.

Now more affordable, Glacial Oak offers an exceptional alternative that will meet your timber needs seamlessly. What makes Glacial Oak truly remarkable is its similarity to Victorian hardwood in terms of supply, performance, price and colour. In fact, Glacial Oak surpasses Victorian ash in aesthetics and workability. You can expect the same versatility, durability and timeless appeal that you've come to love – with added benefits.

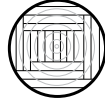

Glacial Oak Benefits

Straight line edged

Set dimensioned,
small packs

Crown cut

Fault docked

More affordable than ever

Gauged to thickness

Glacial Oak Applications

- Staircase components
- DAR & sawn
- Lining
- Furniture & joinery
- Benchtops & panels
- Windows & doors
- Solid & engineered flooring
- Custom mouldings

“

Glacial Oak offers great value to our clients and is a seamless transition from the other common hardwoods we offer”

- STAIRCASE CONSTRUCTIONS

Easily stain Glacial Oak to suit design requirements

Glacial Oak is specifically hand-picked by region and colour to give you a consistently blonde appearance that can be easily stained to match other timber applications.

Swatches are an example of colours that can be achieved using Glacial Oak.

**Importantly,
Glacial Oak
exceeds the
density
requirement
for BAL-12.5
and BAL-19
compliance.**

Weighing in at 730kg/m³, Glacial Oak surpasses the requirement for BAL-12.5 and BAL-19 compliance making it an ideal choice for the Australian climate without compromise on style. For a 25-year guarantee on external applications, see our IronOak range.

Why Glacial Oak?

American Oak is the dominant hardwood species grown in the USA. More than 94.8 million cubic metres of American Oak is grown every year with 54.8 million cubic metres harvested – dwarfing the hardwood volumes grown for production in Australia.

Glacial Oak answers our absolute commitment to sustainable harvesting. The oak forests of USA are increasing by 39.9 million m³ every year and are carefully managed through selective harvesting. When we combine this vast availability, attractive look and performance of Glacial Oak with innovation and high standards of local processing born from decades of experience, it is clearly the perfect material for Australia's volume and architectural markets – especially where consistent quality is paramount.

Contact a Glacial Oak specialist to find out what sizes are available and to discuss your specific application.
